Commvault® + Azure

Migrate and modernize your critical apps

SECURE AND FASTRACK CLOUD ADOPTION

As cloud adoption and digital transformation take shape, core data center applications still present organizational challenges. From resource shortages and infrastructure management to the sheer size and complexity of migration, some mission-critical apps are being left behind. Now, with Commvault Cloud, built on Azure, businesses of every size can secure and modernize their data center with ease.

🔒 **SECURE DATA AND APPS**

⚙ **INCREASE MOBILITY**

⏱ **ACCELERATE CLOUD ADOPTION**

HOW IT WORKS:

1 Secure your apps

Commvault Cloud's single-pane-of-glass management allows you to securely backup on-premises applications with ease. Coupling a secure-by-design architecture with Azure Defender, Commvault Cloud's multi-layered approach to security isolates and preserves data throughout migration—mitigating the risk of data deletion, corruption, or loss.
2 Migrate your workloads

Using enterprise grade scale and performance, Commvault Cloud rehydrates on-premises and legacy data to new, desired locations in the cloud. This provides unmatched mobility for application owners and IT operators to move data to Azure at a best-in-class cost profile.

3 Repeat

Continue securing critical application data on the Commvault platform or select new workloads for migration. With broad-ranging coverage across structured, unstructured, containerized, and virtualized environments (including Azure PaaS, SQL, data lakes, and more), Commvault Cloud empowers migrating and modernizing entire data estates to Azure.

◈ **Commvault**® | ▦ **Microsoft**

TRUSTED TECHNOLOGIES FROM INDUSTRY LEADERS

For over two decades, Commvault and Microsoft have co-engineered and co-developed data management and security solutions for customers. Now Commvault and Microsoft deliver a future-proof solution with the ease of SaaS—bringing together the most innovative cyber resilience and cloud technologies our companies have to offer.
